PERSONAL STATEMENT

I am a professor of earth and environmental science at William Paterson University. My research expertise are centered on: **(1)** the use of geochemical tracers (i.e., isotopes, trace metals, and biomarkers) in sedimentary archives (cave carbonates, terrestrial and marine fossil teeth, corals, sediments) to explore changes in Earth's biogeochemical cycles and by extension evolution of the earth's natural systems. I am particularly interested in building records of past environmental, climatic, and ecological change over various time scales ranging from the last few hundred years to the last ~100 million years; **(2)** the second is primarily focused on utilizing climate model simulations of the past to assess mechanisms, test hypotheses, and in turn help to answer fundamental questions in climate science. I have published my work in high-impact journals, including *Science*, *Science Advances*, *Nature Geoscience*, *Nature Communications*, and *Proceedings of the National Academy of Sciences*. My research has been featured in media outlets around the world, including *The New York Times*, *The Independent*, *National Geographic*, *CNN*, *BBC*, *New Scientist*, and *Scientific American*. I have received funding from the National Oceanic and Atmospheric Administration, National Science Foundation, and the American Chemical Society. I also strive to promote diversity, equity, and inclusion in the geosciences, primarily through active recruitment, retention, and mentoring of students from historically marginalized communities.
